Version 1.0

February 2013

Carbon filter updated

In our on-going commitment to continuously enhance our products and accessories for our customers, we have recently updated our carbon filter. The orientation of the filter has been changed (pictured right) and the internal design has been improved to ensure better seal integrity.

The carbon filter is used in the zero calibration process for the Tiger, Tiger Select, PhoCheck+, FirstCheck+, TVOC, GasClam and MVI instruments.
